2. Experiment 5 Output

Process: Real-time streaming data using Databricks and Azure Event Hub

The screenshots below show the Azure Data Factory configuration and execution output used as part of the experiment. Figure 1 presents the dataset connection settings and pipeline copy-data activity, including the successful run status. Figure 2 presents the linked services view, Azure Data Factory resource overview, and successful deployment confirmation.

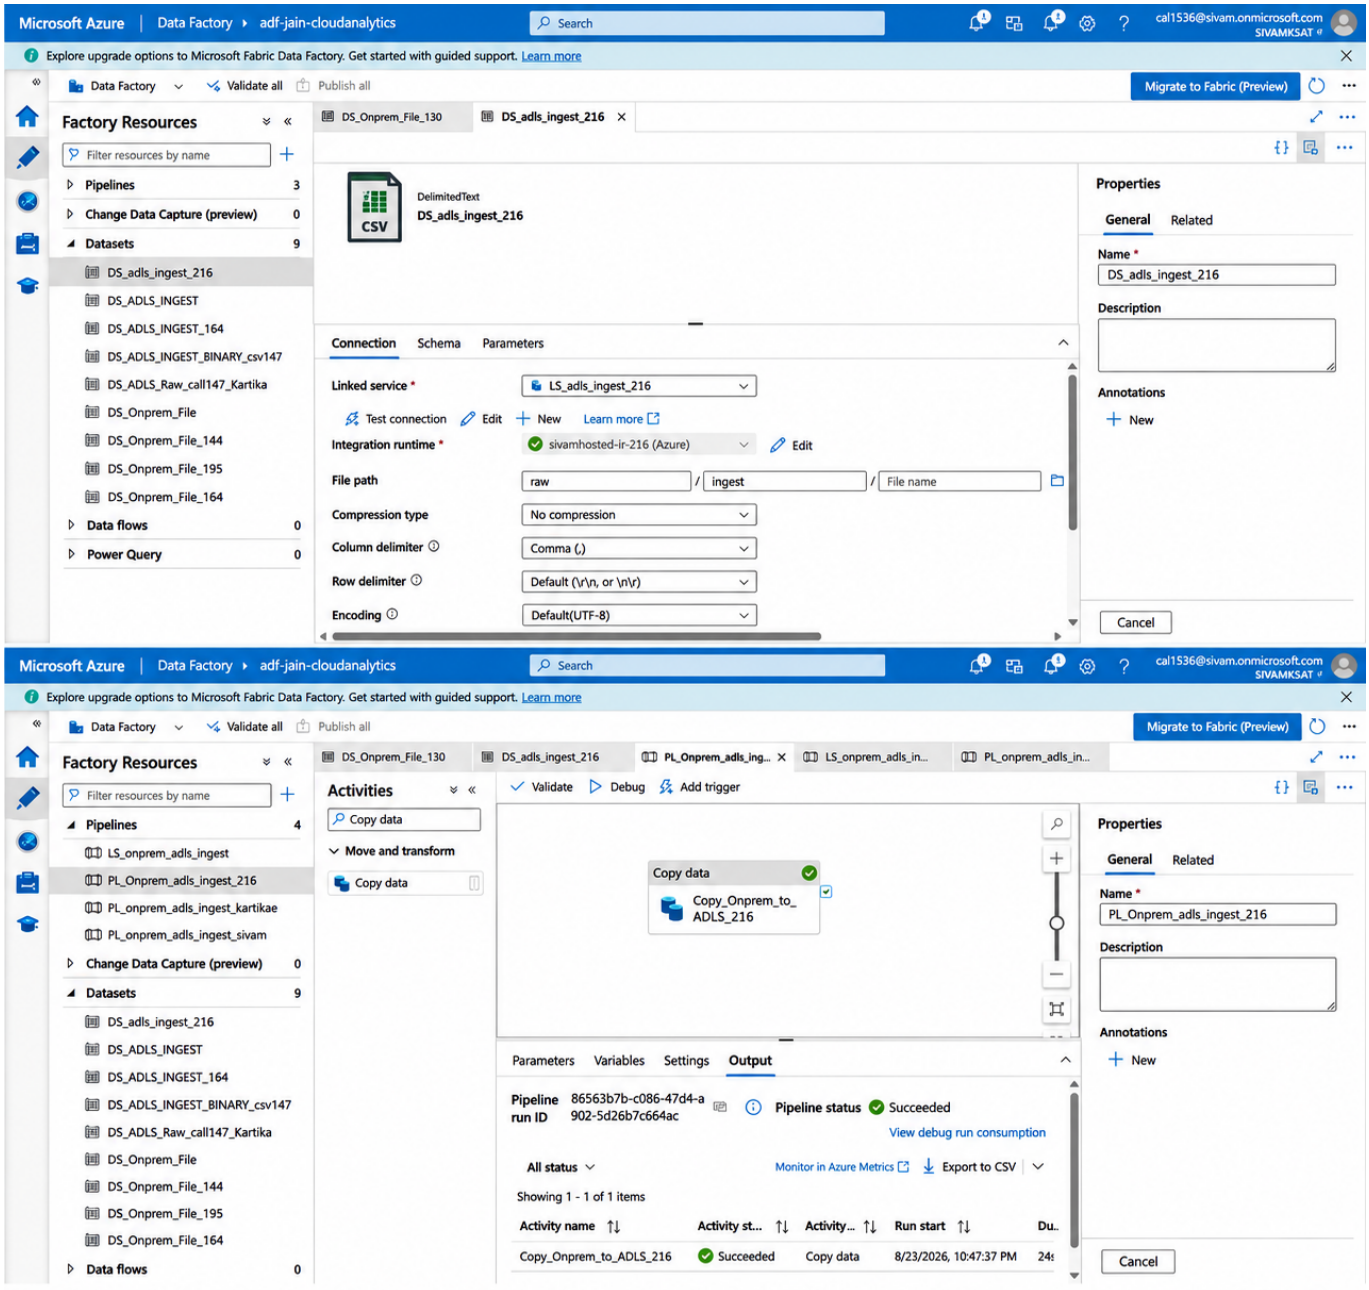

Figure 1. Azure Data Factory dataset configuration and pipeline execution output.

Details: The upper screenshot shows the delimited-text dataset and its linked-service, file-path, delimiter, and encoding settings. The lower screenshot shows the Copy Data pipeline activity and output pane with pipeline status marked as Succeeded.

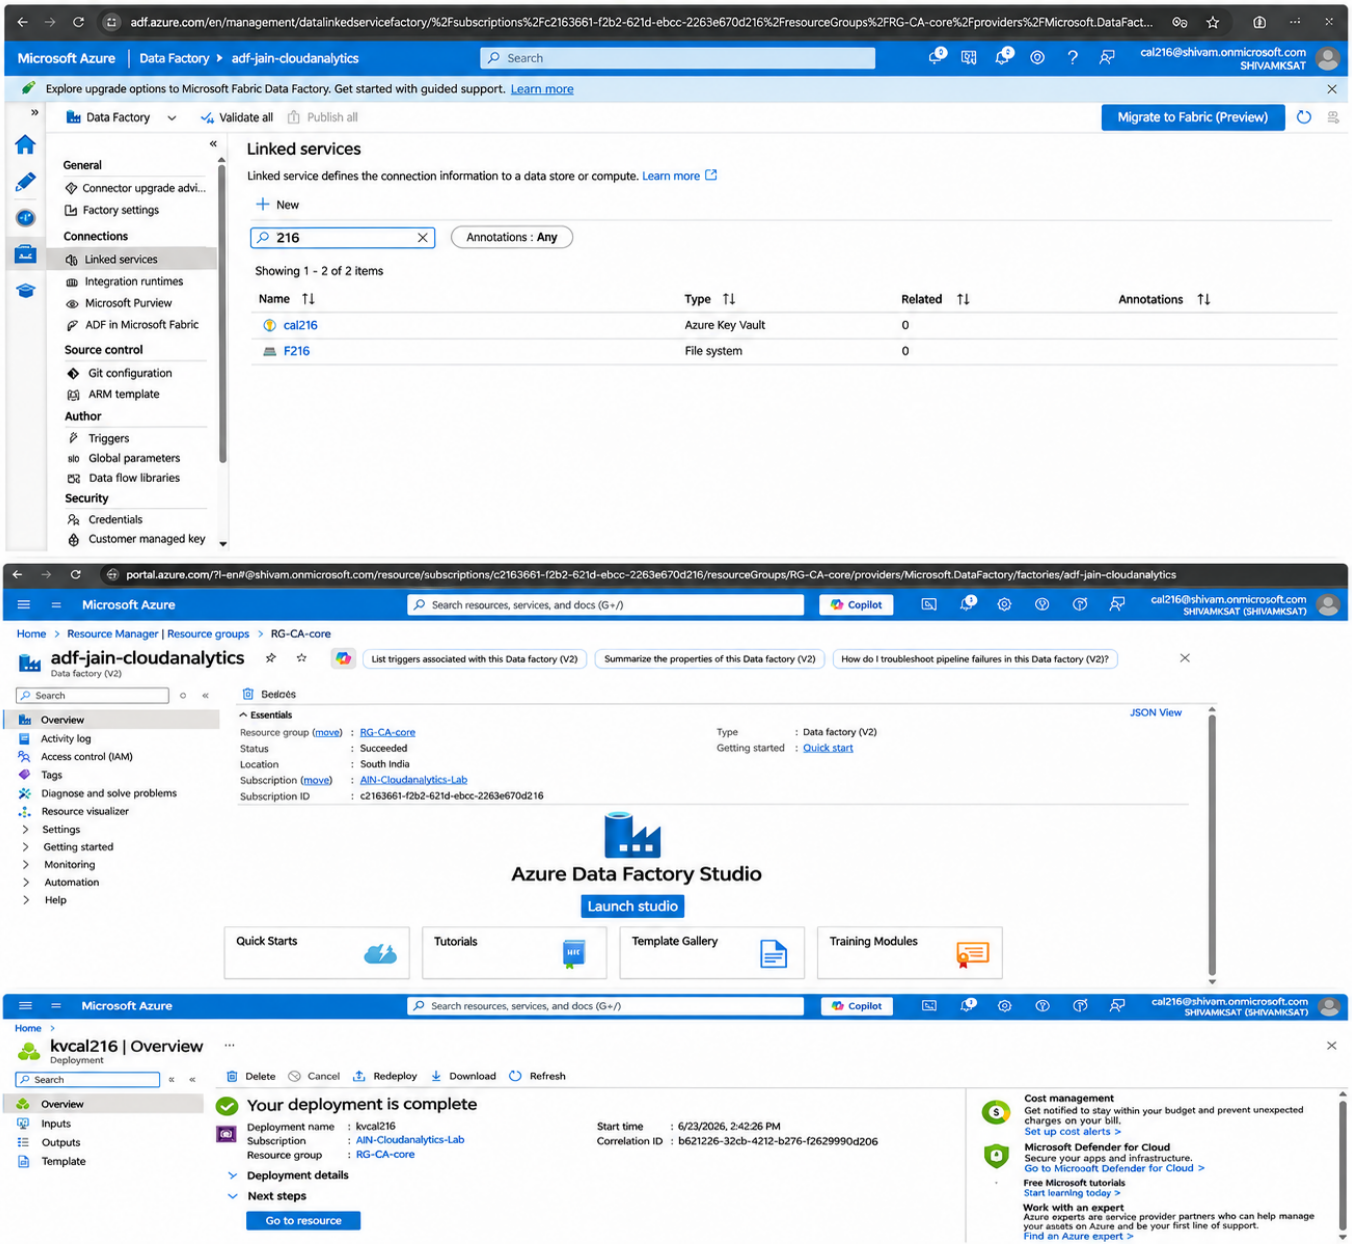

Figure 2. Azure Data Factory linked services, resource overview, and deployment output.

Details: The top screenshot shows the Linked services page with the filtered service entries. The middle screenshot shows the Azure Data Factory resource overview and Studio launch page. The bottom screenshot confirms that deployment completed successfully.
